- The development of Smart TV

# The development of TV

- Analog TV signals
- One-way broadcast
- Fewer TV channels

- Digital television signals
- One-way broadcast
- Relatively rich content
- IP Networks Data
- Fully interactive applications
- Very rich in content

itions

CRT TV

Digital TV

Internet TV

Smart TV

- China's major TV manufacturers have introduced smart TV. Smart TV market is growing rapidly

CHANGHONG

TCL

Hisense

KONKA

Skyworth

Haier

## Summary

- Smart TV conforms to the development trend of TV— “high definition, networked and intelligent ”
- It will provide:
  - ✓ Web search
  - ✓ IP TV
  - ✓ Video on Demand (VOD)
  - ✓ digital music
  - ✓ online news
  - ✓ online video phones
- It realizes the cross-platform search between television, Internet and procedures.

INSTITUTE

- **The basic requirements**

# The basic requirements

- The feature of Smart TV

# The basic requirements

- Support user interface for Language input
- Support open embedded operating system
- Support high-performance multimedia process
- Support wire or wireless connection
- Support Multi screen interactive
- Support App install and uninstall
- Support access to personal network or public network

CHINA  
ELECTRONICS  
STANDARDIZATION  
INSTITUTE

- **The typical applications**

# The typical applications

## Smart TV

Install  
uninstall the  
application

Access to  
the App  
Store

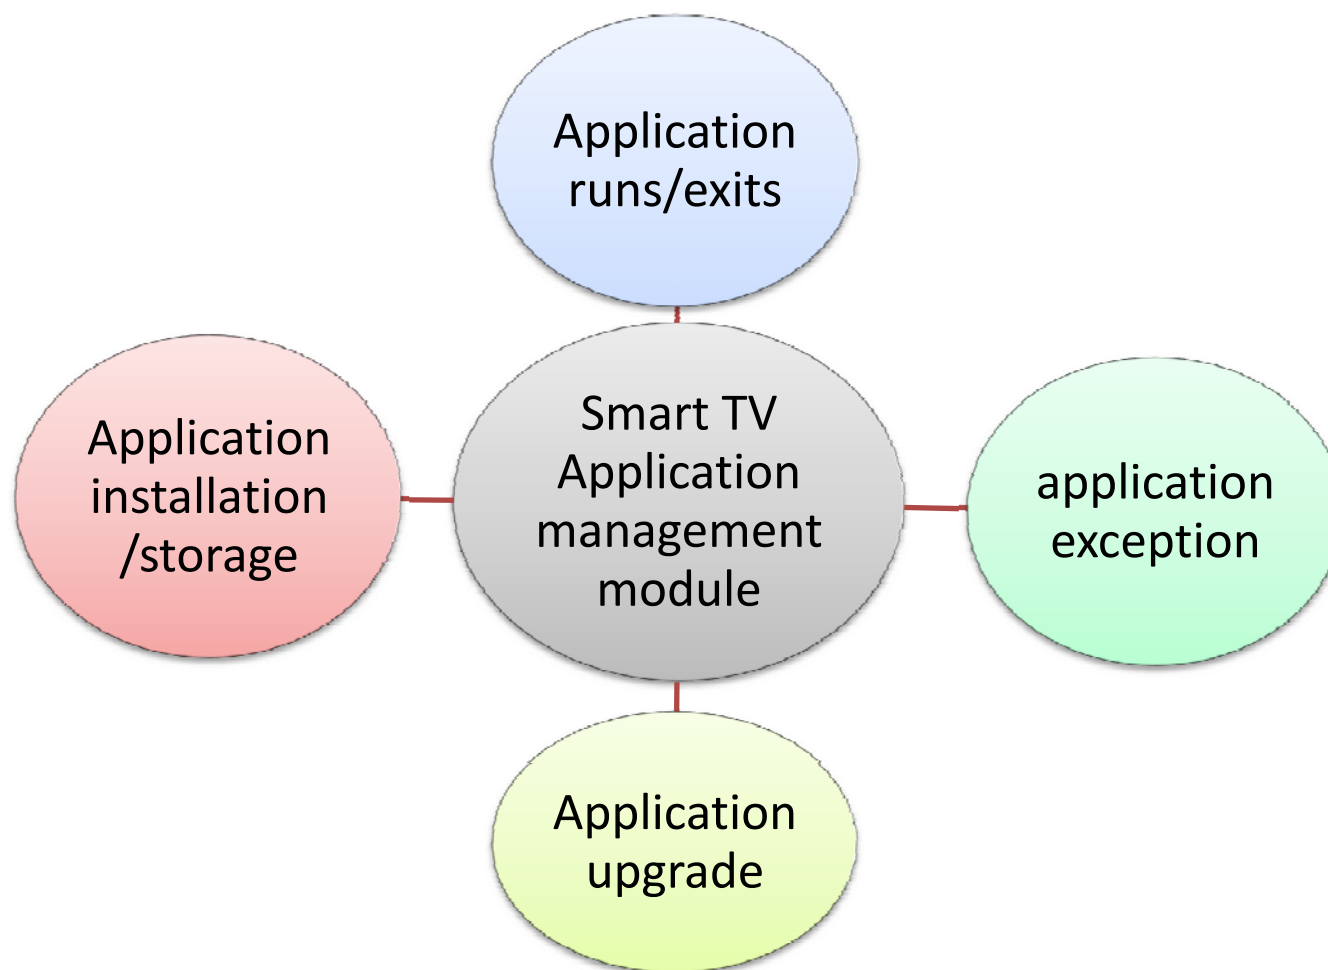

Multi-  
screen  
interactive

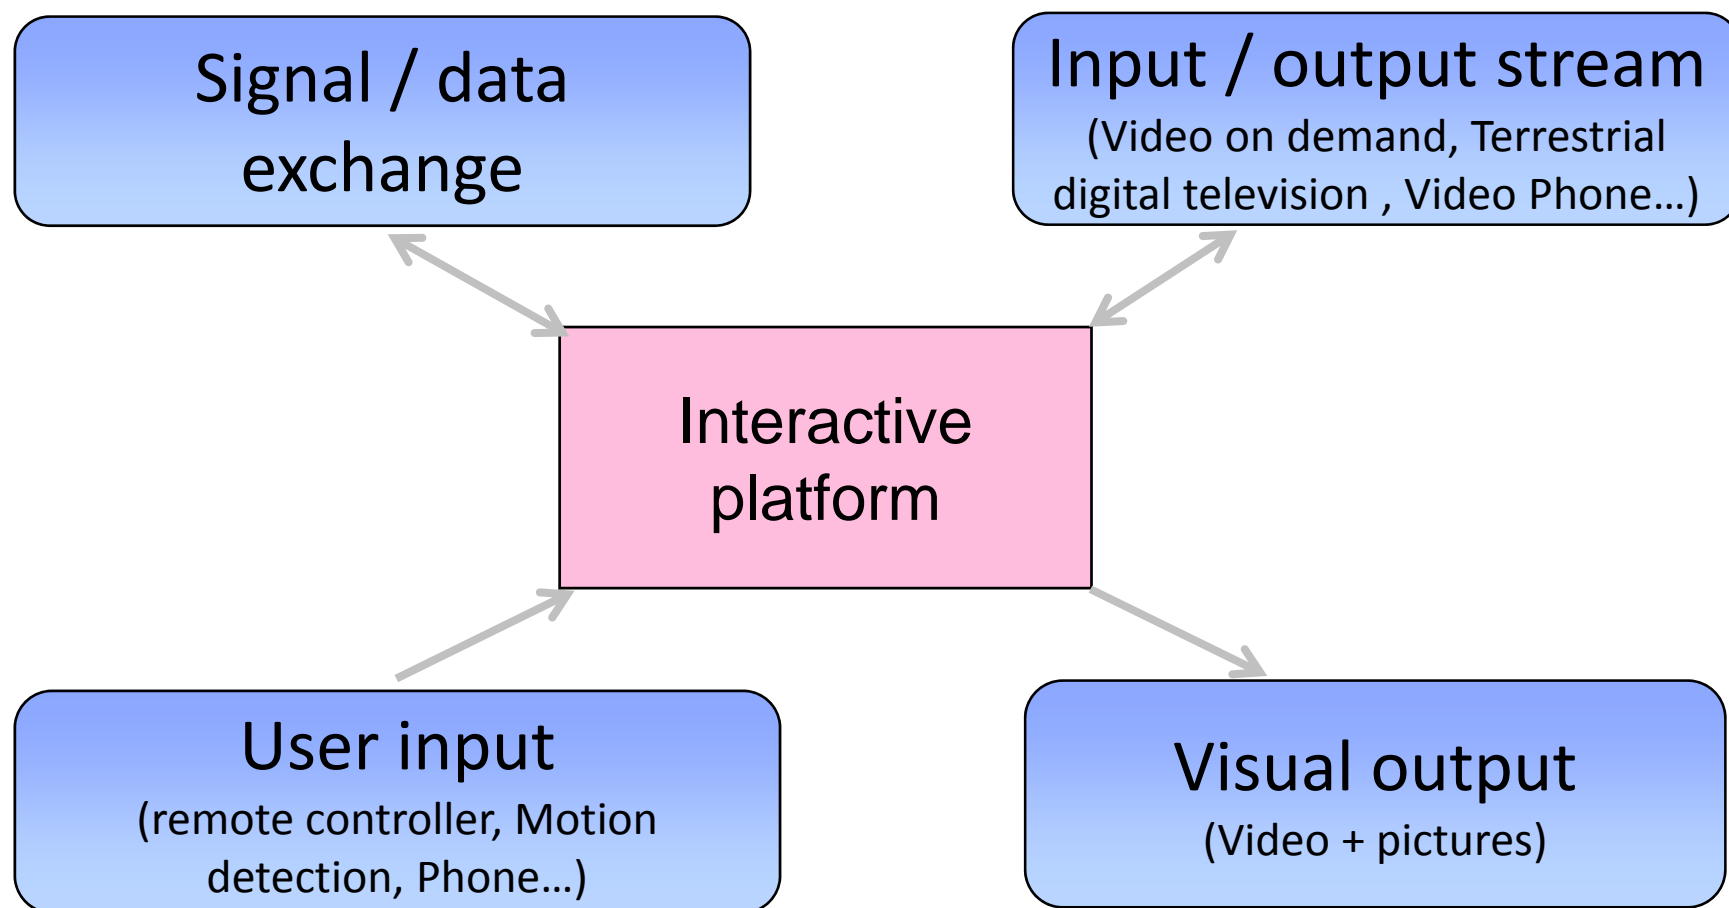

Multi-input  
mode

Support the  
interactive  
applications

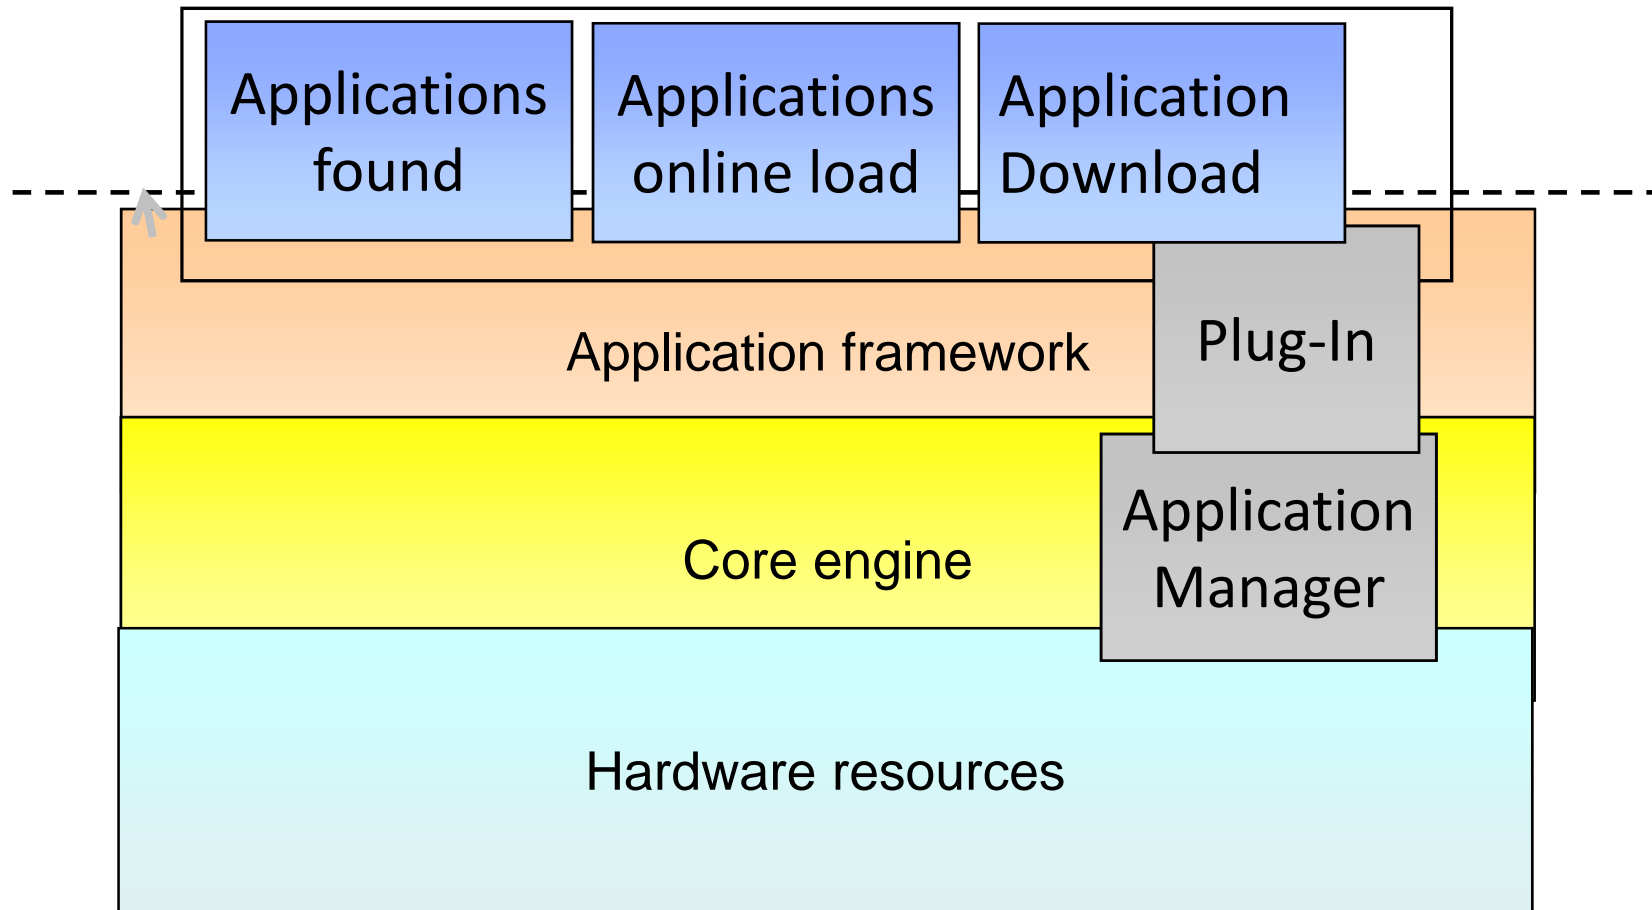

- **System Management**

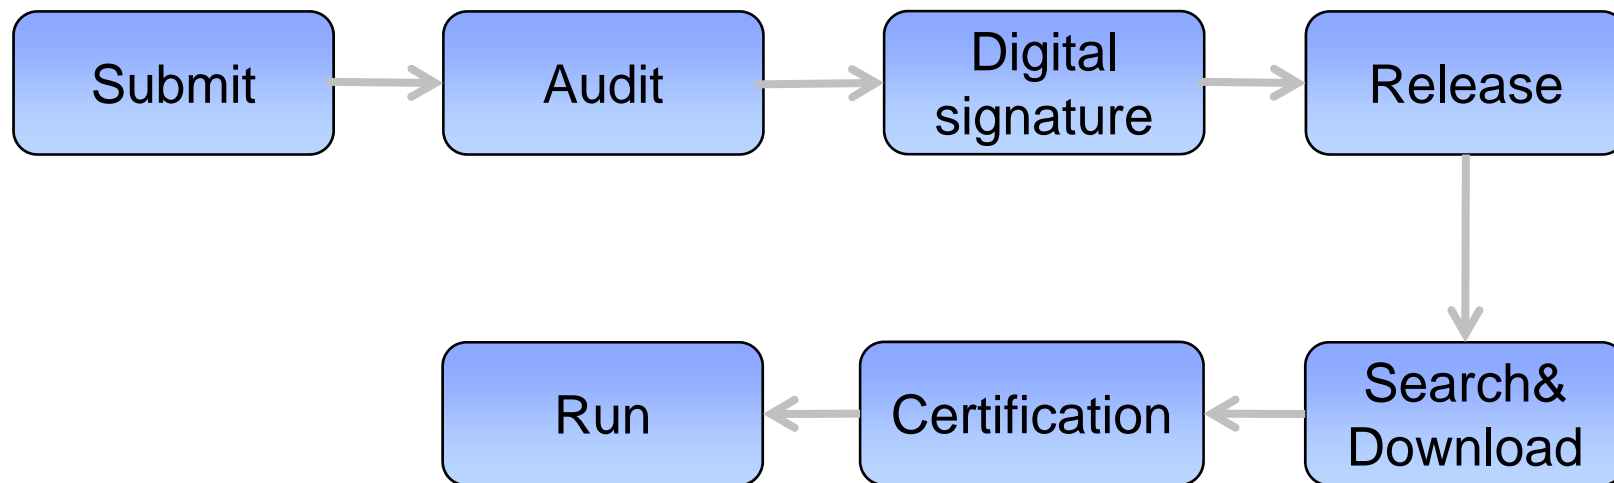

# The Interactive platform API

- Recommend the use of digital signature technology to ensure application integrity

CHINA  
ELECTRONICS  
STANDARDIZATION  
INSTITUTE

# Harmony with existing standards

- The proposed smart TV draft standard will be harmony with the IPTV standards issued by ITU or other international standardization organization.
- It will consider the existing DTV standards.
- It will also focus on the standardization scope of TC 100.
